

public wireless LANs: access solutions

breakaway connectivity for mobile workers

Your mobile workforce needs to stay on the job while on the go. Bringing public wireless access to your enterprise keeps people productive while protecting infrastructure investments along the way.

getting up to speed with public wireless LANs

To make the most of the time on the road, today's increasingly mobile workforce needs to stay connected to enterprise applications, data, and the Web. Hard-wired networks limit freedom and flexibility, and the high cost and low speed of exchanging large documents over cellular or dial-up networks is prohibitive. Public wireless LANs change all that, as the thousands of public wireless LAN hot spots now in airports, hotels, restaurants, and other public spaces provide affordable, secure high-speed access to the Internet, e-mail, and business-critical enterprise applications using virtually any wireless LAN-enabled mobile access device. Your mobile workers are ready to take advantage of this unfettered high-bandwidth connectivity. Is your enterprise ready?

adding public access to your infrastructure

Utilizing the globally accepted IEEE 802.11 standard, the number of public wireless LAN hot spots in public venues is growing rapidly. Now is the ideal time to extend your current network infrastructure to include public wireless access – and give your mobile sales and service professionals fast and secure low-cost connections to vital information, with the same setup they use in the office. With proven experience and global resources, HP is ready to go with everything you need to enable and support public wireless access. Our end-to-end public wireless LAN solutions include industry-leading mobile access devices and industry-standard services, plus solution partnerships and subscriptions, as well as a portfolio of networking, wireless, and mobility services.

boundless benefits

Boost productivity. Public wireless access allows road warriors to make the most of inherently unproductive times.

Empower workers. Give mobile professionals secure and cost-effective high-speed access to the information and applications they need to get the job done.

Eliminate the learning curve. Mobile workers are up and running fast, with the handheld devices, laptops, networks, and applications they use and depend on every day.

Enhance the business value of your infrastructure. Leverage your current and planned investments in networking infrastructure, wireless LANs and Virtual Private Networks (VPNs) by providing secure access via public wireless LANs.

experience at every level

HP has more than 30 years' experience in networking and systems integration, along with well-established leadership in delivering innovative end-to-end wireless solutions. Today, HP is deploying hot spots at the venues your mobile workers frequent. By partnering with leading solution providers, we are delivering wireless access solutions that include subscription services, e-mail, billing, authentication, authorization, and other key capabilities.

No matter where you are today with wireless and networking solutions – whether you have already implemented wireless solutions within your corporate premises, have already launched a Virtual Private Network (VPN), or both, or neither – HP can help you identify and implement the smartest ways to incorporate public wireless access securely into your existing infrastructure.

a total solution

Easily tailored to meet your evolving access requirements, HP's end-to-end solution for supporting public wireless access includes:

- **Mobile devices**, including laptops and the award-winning HP iPAQ Pocket PC, to provide secure wireless-ready access
- **Industry-standard servers** delivering the reliability, scalability, and manageability needed to support mobile applications
- **Public wireless LAN implementation** including access points, antennas, security, network integration, and ongoing management
- **Enabling software and wireless applications** from HP and partners around the globe, handling billing, access, authentication, and authorization
- **Subscription services** through key partners, providing your employees with the rights to use public wireless access services
- **Consulting and integration services** supporting your approach to public wireless access throughout the solution lifecycle – from assessment and design to integration, staging, and deployment

- **Security services** ensuring secure access to enterprise applications and corporate information assets
- **Support services** providing support for mobile platforms and applications around the clock and around the world
- **Outsourcing & Managed Services** based on a fixed per-month cost for a range of services – from targeted help desk support to complete outsourcing services as well as product replacement, so that your mobile workers have the latest devices in hand while your business is protected from technology churn
- **Financial Services** that offer innovative technology leasing and financial asset management solutions, so you can bring public wireless access capabilities to your enterprise without a major upfront capital investment
